READ ME

Q1. Set data set at top of code (change mauna_loa to other data sets) and comment or uncomment ind code in knn_5fold depending on which data set was chosen (Comments are on lines stating which data sets they are meant for).
Functions can be called with proper inputs (xtrain in function definition will take x_train variable when function is called etc.).

Q2. Run code similar to Q1 by setting data at the top of the code and following the same variable naming/matching convention.

Q3. Run code similar to Q1 by setting data at the top of the code and following the same variable naming/matching convention.
